EXPERIENCE

- **Microsoft** Redmond, WA
Software Engineer, Azure Cloud & AI 05/2019 - Present
 - **Ev2 Auto Bootstrap:** Using C#/ASP.NET to build REST API that enables one-click production CI/CD pipeline generation in Azure DevOps, facilitating secure planet-scale deployment to Azure cloud via Ev2.
 - **Source Control Page Modernization:** Mentored a junior engineer on the legacy Geneva Portal's UX architecture and pair-programmed to deliver a modernization feature, cutting the timeline **from 2+ weeks to 3 days** for a service generating **40% of our team's support workload**.
 - **Monitor V2 Parameterization:** Designed and implemented the initial API for Ev2-compatible parameters, enabling multi-cloud deployment. Recruited a teammate to scale the feature across all Geneva account configuration types, streamlining customer management of configurations and deployments across multi-region tenants.
 - **Geneva Source Control Webhooks:** Built an API in C# to re-sync Geneva Monitoring accounts to Azure DevOps, **reducing the support burden by 30%**.
 - **Dev Build Optimizer:** Used Rust, Go, SWC, and Vite to evaluate options for optimizing/speeding up dev and production builds for ReactJS apps.
 - **Metrics Experiences UX:** Collaborated with cross-functional teams to integrate an embedded ReactJS metrics UX into the default onboarding experience for **40% of the partner team's customers**.
 - **Geneva Portal Migration:** Used ReactJS to implement parity features between Geneva Portal and Classic Jarvis Portal, **migrating 50%** of systems from Xpert to Geneva and driving **100% adoption** of Geneva Portal for **40K** customers.
 - **Metrics Landing Pages:** Used C# and Reactjs to develop API and UI that allowed users to manage Geneva Account metrics and monitors, leading to a **50% reduction** in time to manage production service configurations across multiple accounts.
 - **Virtual Dashboards:** Built real-time collaborative dashboard service for **20K+ engineers** using C#/ASP.NET and KnockoutJS, **reducing quarterly costs by \$2M**.
- **Leidos** Orlando, FL
[Secret Clearance] Software Engineering Intern, R & D 05/2018 - 05/2019
 - **AFATDS:** Developed mode transitioning system for US Army's AFATDS simulation using Angular 4 and Java w/ Spring Boot.

PROJECTS

- **Retrieval Augmented Generation Docs Chat:** Built a production-level RAG application enabling dev teams to chat with their docs and students with their textbooks. Utilized FastAPI, Azure OpenAI Embeddings, GPT Turbo 3.5, ChromaDB, and Terraform for seamless infrastructure deployment to Microsoft Azure.
- **AI Industry Translator:** Developed a B2B SaaS for due diligence on external industry partners. Flask/Python back-end using MongoDB, OpenAI, & Stripe for payments. ReactJS/Typescript front-end, React Native mobile app, and Docker for serverless AWS deployments.
- **Foundation of Lights Webapp:** Used NextJS and Paypal to create a web application for a community organization that processes **\$10K+/mo** in donations and supports **200+** unique users. Leveraged SSR to reduce monthly spend by **36x**, net a **5.3x** speed increase, and consume **20.75x** less data.

SKILLS

- **Languages:** Java/C#, Typescript, Python, Golang, SQL
- **Technologies:** Azure DevOps, MongoDB, Firebase, Docker, Terraform, Vercel, Reactjs/Nextjs, ASP.NET, Node.js, TailwindCSS, Git/Github, Flask, FastAPI, Langchain, Ollama, MySQL

LEADERSHIP

- **Technical Mentorship:** Currently mentoring multiple junior software engineers, previously mentored mid-level engineers from undergrad until new grad.

EDUCATION

- **University of Central Florida** Orlando, FL
Bachelor of Science in Computer Science
